

Identity Lifecycle Management Strategy Service Core Infrastructure Solutions

Get started quickly with HP Express Services

HP Express Services are designed as fast to deploy, packaged offerings to quickly and cost-effectively help your organisation achieve new efficiencies and competitive advantage.

Streamline your Identity Management

Many organisations are subject to loss of productivity and security risks due to manual processes required for a user to be added or removed from the multiple systems they access. Management of this process is cumbersome for the IT staff and a security risk for the organisation due to the number of passwords that must be managed by an end user.

This HP Express Service is designed to enable you to take the first step in automating the provisioning and de-provisioning of users in a consistent manner by leveraging the capabilities of Microsoft Active Directory and Microsoft's Identity Lifecycle Manager solution (formerly known as Microsoft Identity Integration Server).

Service benefits

This service will get you on the road to more effectively manage identities within your environment by developing a high level architecture that utilises Microsoft Identity Lifecycle Manager to address your current challenges.

Working in line with your business and technical objectives, HP's experienced consultants will provide

expert guidance to develop fundamental identity provisioning processes and a high level supporting architecture for the solution.

The right fit

The Identity Lifecycle Management Strategy Service is best suited to your organisation if you are looking to:

- Automate user account provisioning and de-provisioning
- Manage the deployment of SmartCards and Digital Certificates in your environment
- Enhance and automate system access control
- Leverage information from other systems (such as a Payroll database) to control access to your environment
- Leverage information from other systems (such as a Phone List) to populate contact information within Microsoft Active Directory
- Synchronise passwords between multiple directories to simplify application access

Service feature highlights

A trained and experienced consultant from HP will work with your organisation to:

- Obtain information on your existing environment (via a questionnaire)
- Identify eligible system candidates and their roles for the Identity Lifecycle process
- Develop a high level flow diagram demonstrating an Identity Lifecycle data flow process suitable for your environment
- Develop a high level Identity Lifecycle Manager Architecture
- Identify the hardware and software requirements for the solution

Specifications of service

Features

Delivery specifications

Service overview

The **Identity Lifecycle Management Strategy Service** is delivered by trained and experienced HP consultants and includes the following tasks:

- Provide a detailed questionnaire to gather information on your existing environment
- Conduct business and technical objectives workshops
- Highlight technology suited to your objectives
- Develop a high level flow diagram demonstrating an Identity Lifecycle data flow process suitable to your environment
- Develop and present a high level architecture
- Identify hardware and software requirements for the solution

Service deliverables

The Identity Lifecycle Management Strategy Service will deliver a report summarising the following:

- Systems that have been identified as potential candidates for the Identity Lifecycle process
- A description of how each system candidate can participate in the Identity Lifecycle process
- A high level Identity Lifecycle data flow diagram
- A proposed Architecture for the solution
- Indicative hardware and software requirements

Service conditions

The Identity Lifecycle Management Strategy Service is focused on defining an architecture and approach for an Identity Lifecycle solution built on Microsoft's Identity Lifecycle Manager. It does not include detailed solution design or implementation services.

Customer responsibilities

To ensure the engagement is successful, HP requires you to allocate appropriate resources to participate in the meetings, workshops and presentations for this engagement and provide appropriate facilities to conduct the workshops (where the workshops are completed onsite).

During the engagement it is important that Subject Matter Experts are available for each system considered a candidate for the Identity Lifecycle process.
